About me

An AIML undergraduate student at VIT Bhopal with a strong interest in building practical machine learning and data-driven applications. Comfortable working with Python, data analysis libraries, and basic ML workflows, with a focus on turning ideas into working prototypes that are easy to use and understand. Enjoys learning by doing: experimenting with projects like house price prediction dashboards and small automation tools.

What I am working on

- Developing end-to-end ML mini projects such as house price prediction and regression dashboards, including data preprocessing, model training, and result visualization.
- Exploring how to deploy simple ML models on web interfaces using tools like Streamlit to make models interactive for users.
- Practicing Python through structured coding tasks and small utilities (e.g., calculators, converters, basic simulations) to strengthen problem-solving skills.

README

simulations) to strengthen problem-solving skills.

Short-term and long-term goals

Short-term:

Build a solid foundation in core AIML subjects (data structures, algorithms, ML basics, statistics).

Complete a few strong GitHub projects with clean code, clear documentation, and simple UI demos.

Long-term:

- Become a machine learning engineer / data scientist capable of designing and deploying real-world AI solutions.
- Contribute to open-source AIML projects and collaborate with other developers on GitHub.

Current Focus

Actively focusing on building beginner-friendly AI/ML projects in Python (like house price prediction dashboards) while completing AIML coursework at VIT Bhopal and improving skills in data analysis, model deployment, and clear project documentation.
